**MORNING WAVE · AUG 1**
[Source](#)

Blocks 960518–960523. Direct victim sweeps (~15–50 sat/vB) into one vault. Includes a reported Mk4 RNG / duress-wallet honey pot (device model not visible on-chain).

## Movement feed

Outbound spends from watched holdings, then followed destinations (up to hop 2). Empty means funds have not left consolidation.

## No outbound spends

All watched balances still match the post-sweep holding set.

## Am I at risk?

Short checklist from Coinkite’s Aug 1 advisory and Block’s root-cause writeup. This tracker does not check your wallet — follow the official steps before moving funds.

### LIKELY EXPOSED

Your seed is likely exposed if it was generated on vulnerable firmware. Fixed releases and later are safe for new seeds.

| DEVICE           | VULNERABLE                   | FIXED    |
|------------------|------------------------------|----------|
| Mk3              | 4.0.1–4.1.9 (~40-bit)        | 4.2.0+   |
| Mk4 / Mk5        | Before Aug 1 patch (~72-bit) | 5.6.0+   |
| Q                | Before Aug 1 patch (~72-bit) | 1.5.0Q+  |
| Edge (Mk4 / Mk5) | Before Aug 1 patch           | 6.6.0X+  |
| Edge (Q)         | Before Aug 1 patch           | 6.6.0QX+ |

### MK4 IS IN SCOPE NOW

Early drains fit Mk3’s ~40-bit search space. Community reports now include Mk4 RNG seeds being swept — device model is not visible on-chain, so treat vulnerable Mk4 / Mk5 / Q seeds with the same urgency.

### BEYOND THE MAIN SEED

The same weak RNG also covered paper-wallet keys, Seed XOR masks, and some Key Teleport / clone / Secure Notes material (Block).

### FIRMWARE UPDATE IS NOT ENOUGH

Patching does not repair an existing seed. Generate a new seed on fixed firmware and migrate funds carefully.

### LOWER RISK

At least 50 private dice rolls at seed creation, or a strong unique BIP-39 passphrase (not the device PIN). Still migrate when practical.

## NOT THIS BUG

TAPSIGNER, Opendime, and Satscard use different codebases and are not affected.

---

## SOURCES

### Galaxy Research

Mapped the July 30 fingerprint set: 1,082.65 BTC across 1,196 addresses into four holdings.

### Kevin Kelbie

July 31 post-scan wave (~45.9 BTC) after Block's scan window; similar markers, different RBF behavior.

### Evan Schoenberg

Evening July 31 low-fee (~2 sat/vB) sweeps consolidated into a separate ~0.51 BTC vault.

### Tomer Strolight

Aug 1 morning wave: reported Mk4 RNG / duress-wallet honey pot swept into a ~0.33 BTC vault (blocks 960518–960523).

### Coinkite advisory

Official guidance (updated Aug 1): who is exposed, fixed firmware versions, and migration steps.

### Block Engineering

Root-cause writeup on the RNG fallback, 32-bit reseed, and blast radius beyond BIP-39 seeds.

### CoinDesk

Aug 1 reporting on Galaxy's expanded totals and why further waves remain possible.

### Clay Garrett

July 30 operator used a paid blockchain-data account during the sweeps; findings shared with authorities.
