Am I at risk?

Short checklist from Coinkite's Aug 1 advisory and Block's root-cause writeup. This tracker does not check your wallet — follow the official steps before moving funds.

LIKELY EXPOSED

Your seed is likely exposed if it was generated on vulnerable firmware. Fixed releases and later are safe for new seeds.

DEVICE	VULNERABLE	FIXED
Mk3	4.0.1–4.1.9 (~40-bit)	4.2.0+
Mk4 / Mk5	Before Aug 1 patch (~72-bit)	5.6.0+
Q	Before Aug 1 patch (~72-bit)	1.5.0Q+
Edge (Mk4 / Mk5)	Before Aug 1 patch	6.6.0X+
Edge (Q)	Before Aug 1 patch	6.6.0QX+

MK4 IS IN SCOPE NOW

Early drains fit Mk3's ~40-bit search space. Community reports now include Mk4 RNG seeds being swept — device model is not visible on-chain, so treat vulnerable Mk4 / Mk5 / Q seeds with the same urgency.

BEYOND THE MAIN SEED

The same weak RNG also covered paper-wallet keys, Seed XOR masks, and some Key Teleport / clone / Secure Notes material (Block).

NOT THIS BUG

TAPSIGNER, Opendime, and Satscard use different codebases and are not affected.

FIRMWARE UPDATE IS NOT ENOUGH

Patching does not repair an existing seed. Generate a new seed on fixed firmware and migrate funds carefully.

LOWER RISK

At least 50 private dice rolls at seed creation, or a strong unique BIP-39 passphrase (not the device PIN). Still migrate when practical.
