Movement feed

Outbound spends of the reported consolidation from watched holdings, then followed destinations (up to hop 2). Later surplus that passes through a vault while its reported balance remains is ignored.

No outbound spends

Reported consolidation balances have not left the holding addresses.

Am I at risk?

Short checklist from Coinkite’s Aug 1 advisory and Block’s root-cause writeup. This tracker does not check your wallet — follow the official steps before moving funds.

LIKELY EXPOSED

Your seed is likely exposed if it was generated on vulnerable firmware. Fixed releases and later are safe for new seeds.

DEVICE	VULNERABLE	FIXED
Mk3	4.0.1–4.1.9 (~40-bit)	4.2.0+
Mk4 / Mk5	Before Aug 1 patch (~72-bit)	5.6.0+
Q	Before Aug 1 patch (~72-bit)	1.5.0Q+
Edge (Mk4 / Mk5)	Before Aug 1 patch	6.6.0X+
Edge (Q)	Before Aug 1 patch	6.6.0QX+

FIRMWARE UPDATE IS NOT ENOUGH

Patching does not repair an existing seed. Generate a new seed on fixed firmware and migrate funds carefully.

LOWER RISK

At least 50 private dice rolls at seed creation, or a strong unique BIP-39 passphrase (not the device PIN). Still migrate when practical.

BEYOND THE MAIN SEED

The same weak RNG also covered paper-wallet keys, Seed XOR masks, and some Key Teleport / clone / Secure Notes material (Block).

NOT THIS BUG

TAPSIGNER, Opendime, and Satscard use different codebases and are not affected.

SOURCES

Galaxy Research

Mapped the July 30 fingerprint set: 1,082.65 BTC across 1,196 addresses into four holdings.

Kevin Kelbie

July 31 post-scan wave (~45.9 BTC) after Block's scan window; similar markers, different RBF behavior.

Evan Schoenberg

Evening July 31 low-fee (~2 sat/vB) sweeps consolidated into a separate ~0.51 BTC vault.

Tomer Strolight

Aug 1 morning wave: duress-wallet honey pot swept into a ~0.33 BTC vault; Mk4 attribution later corrected to Mk3-origin seed.

Coinkite advisory

Official guidance (updated Aug 1): who is exposed, fixed firmware versions, and migration steps.

Block Engineering

Root-cause writeup on the RNG fallback, 32-bit reseed, and blast radius beyond BIP-39 seeds.

CoinDesk

Aug 1 reporting on Galaxy's expanded totals and why further waves remain possible.
