Watched holdings

About 1,368.58411114 BTC drained across tracked clusters. Galaxy’s same-operator total is 1,367.05 BTC across 4,585 addresses. 1,345.16394201 BTC is in watched holdings (core vaults live-pollled; 78 higher-value Wave 3 vaults ≥ 0.50 BTC from the cron snapshot). The remaining ~23.42016913 BTC is mostly smaller/unmatched Wave 3 vaults plus fees. Evening/morning waves may be different operators.

GALAXY WAVE 1 • JULY 30 [Source](#)

Blocks 960183–960191 • fixed 30 sat/vB • four consolidation holdings.

GALAXY WAVE 3 • JUL 31–AUG 1 • 78 vaults [Source](#)

Blocks 960396–960471 • Galaxy: ~1,912 victims, ~200 sat/vB, 293 park → P2WSH vaults (~207.73 BTC). Watching 78 higher-value fingerprint matches (≥ 0.5 BTC each, ~184.97 BTC) — see attribution below.

WHY THESE LOOK LIKE STOLEN WAVE 3 FUNDS

Not Galaxy’s published address list. Matched their Wave 3 fingerprint (blocks 960396–960471, ~180–220 sat/vB, park → P2WSH vault), cross-checked against the public COLDCARD RNG chain map, then kept only higher-value vaults (≥ 0.5 BTC) so the cron snapshot stays reliable on public explorers. Smaller vaults are omitted on purpose. Partial versus Galaxy’s ~293 vaults / ~207.73 BTC.

EVENING WAVE · JULY 31 [Source](#)

Low-fee (~1–2 sat/vB) sweeps. Both watched holdings (~1.20 BTC) emptied Aug 1–2 and are peeling toward cash-out. Stolen hops and the Ocean (OCEAN.XYZ) miner peel that touched the Aug 1 hop vault later consolidated into the same busy P2SH ([3KMmeqPe...](#)) — same-operator link; Ocean sats not counted as stolen. Distinct from Galaxy Wave 2.

LABEL	ADDRESS	BALANCE	REPORT	UTXOS	STATUS
Evening vault Jul 31 consolidation (~0.51 BTC). Emptied Aug 2; onward peels in progress	bc1q7rmsw0...lrrcgf	0.00 BTC \$0	0.50980268 BTC	0	EMPTIED
Aug 1 hop vault 0.4998 BTC Aug 1 pass-through + 0.1915 BTC delayed Jul 31 victim consolidation. Emptied Aug 2. Ocean miner peel from here later met stolen hops at the same P2SH cash-out	bc1qayw8nr...7w2u0s	0.00 BTC \$0	0.69135523 BTC	0	EMPTIED

Am I at risk?

Short checklist from Coinkite’s Aug 1 advisory, Block’s root-cause writeup, and WizardSardine’s analysis. This tracker does not check your wallet — follow the official steps before moving funds.

LIKELY EXPOSED

Your seed is likely exposed if it was generated on vulnerable firmware. Fixed releases and later are safe for new seeds.

DEVICE	VULNERABLE	FIXED
Mk3	4.0.1–4.1.9, 5.0.1–5.0.3 (~40-bit)	4.2.0+
Mk4 / Mk5	Before Aug 1 patch (~72-bit)	5.6.0+
Q	Before Aug 1 patch (~72-bit)	1.5.0Q+
Edge (Mk4 / Mk5)	Before Aug 1 patch	6.6.0X+
Edge (Q)	Before Aug 1 patch	6.6.0QX+

FIRMWARE UPDATE IS NOT ENOUGH

Patching does not repair an existing seed. Generate a new seed on fixed firmware and migrate funds carefully.

BEYOND THE MAIN SEED

Weak RNG also hit paper-wallet keys, clone / Key Teleport material, and some Secure Notes passwords — even when the BIP-39 seed itself came from dice (WizardSardine / Block).

NOT THIS BUG

TAPSIGNER, Opendime, and Satscard use different codebases and are not affected. Mk1 and pre-4.0.1 Mk2/Mk3 firmware used the real TRNG.

ORIGIN OF THE SEED

Exposure follows where the seed was generated, not the device holding it today. Seeds imported elsewhere, or whose origin you cannot establish, should be treated as affected.

LOWER RISK

At least 50 private dice rolls at seed creation. A long truly random BIP-39 passphrase (not the device PIN) may buy time, but weak passphrases are not a safe bet — still migrate when practical.

SOURCES

Galaxy Research · Wave 3

Aug 1: third wave (~207.73 BTC into 293 P2WSH vaults). Observed total 1,367.05 BTC across 4,585 addresses.

Galaxy Research · Wave 2

Aug 1: second wave attributed to the same operator — 1,158.81 BTC / 2,673 addresses across seven holdings.

Galaxy Research · Wave 1

Mapped the July 30 fingerprint set: 1,082.65 BTC across ~1,195 addresses into four holdings.

Kevin Kelbie

Independently flagged the ~45.9 BTC July 31 vault (now Galaxy Wave 2) after Block’s scan window; RBF differed from Wave 1.

Evan Schoenberg

Evening July 31 low-fee (~2 sat/vB) sweeps into a separate vault; Aug 1 hop consolidation (incl. delayed ~0.19 BTC) raised the watched cluster to ~1.20 BTC.

Ocean block 960511

Coinbase of block 960511 (tag OCEAN.XYZ) paid ~0.060 BTC that later touched the Aug 1 hop vault and was peeled off (not counted as stolen). That peel later hit the same P2SH cash-out (**3KMmeqPe...**) as the stolen evening-wave hops — strong same-operator link.

Tomer Strolight

Aug 1 morning wave: duress-wallet honey pot swept into a ~0.33 BTC vault; Mk4 attribution later corrected to Mk3-origin seed.

Coinkite advisory

Official guidance (updated Aug 1): who is exposed, fixed firmware versions, and migration steps.

Block Engineering

Root-cause writeup on the RNG fallback, 32-bit reseed, and blast radius beyond BIP-39 seeds.

WizardSardine

Aug 1 deep dive: who is affected (including Mk3 5.0.x), advanced features still broken with dice seeds, and migration guidance.

Kevin Loaec

Announcement thread for the WizardSardine writeup.

CoinDesk

Aug 1 reporting on Galaxy’s expanded totals and why further waves remain possible.

Clay Garrett

July 30 operator used a paid blockchain-data account during the sweeps; findings shared with authorities.
