## Watched holdings

About 1,433.49359078 BTC drained across tracked clusters. Galaxy’s same-operator total is 1,367.05 BTC across 4,585 addresses. 1,410.06767965 BTC is in watched holdings (core vaults live-pollled; 78 higher-value Wave 3 vaults  $\geq 0.50$  BTC from the cron snapshot). The remaining ~23.42591113 BTC is mostly smaller/unmatched Wave 3 vaults plus fees. Evening/morning waves may be different operators.

### GALAXY WAVE 1 • JULY 30 [Source](#)

Four consolidation holdings. Multi-path key-scan signature (BIP-84/49/44).

## Am I at risk?

Short checklist from Coinkite’s Aug 1 advisory, Block’s root-cause writeup, and WizardSardine’s analysis. This tracker does not check your wallet — follow the official steps before moving funds.

### LIKELY EXPOSED

Your seed is likely exposed if it was generated on vulnerable firmware. Fixed releases and later are safe for new seeds.

| DEVICE           | VULNERABLE                         | FIXED    |
|------------------|------------------------------------|----------|
| Mk3              | 4.0.1–4.1.9, 5.0.1–5.0.3 (~40-bit) | 4.2.0+   |
| Mk4 / Mk5        | Before Aug 1 patch (~72-bit)       | 5.6.0+   |
| Q                | Before Aug 1 patch (~72-bit)       | 1.5.0Q+  |
| Edge (Mk4 / Mk5) | Before Aug 1 patch                 | 6.6.0X+  |
| Edge (Q)         | Before Aug 1 patch                 | 6.6.0QX+ |

### FIRMWARE UPDATE IS NOT ENOUGH

Patching does not repair an existing seed. Generate a new seed on fixed firmware and migrate funds carefully.

### MIGRATE BEFORE YOU UPGRADE

If this Coldcard is your only signer for a weak seed, move funds first. Community reports (including Jameson Lopp) flag a non-zero chance the hotfix upgrade bricks the unit. Prefer sweeping to a new seed on a second fixed device when possible.

### ORIGIN OF THE SEED

Exposure follows where the seed was generated, not the device holding it today. Seeds imported elsewhere, or whose origin you cannot establish, should be treated as affected.

### BEYOND THE MAIN SEED

Weak RNG also hit paper-wallet keys, clone / Key Teleport material, and some Secure Notes passwords — even when the BIP-39 seed itself came from dice (WizardSardine / Block).

### LOWER RISK

At least 50 private dice rolls at seed creation. A long truly random BIP-39 passphrase (not the device PIN) may buy time, but weak passphrases are not a safe bet — still migrate when practical.

### NOT THIS BUG

TAPSIGNER, Opendime, and Satscard use different codebases and are not affected. Mk1 and pre-4.0.1 Mk2/Mk3 firmware used the real TRNG.

### SOURCES

#### Galaxy Research · Wave 3

Aug 1: third wave (~207.73 BTC into 293 P2WSH vaults). Observed total 1,367.05 BTC across 4,585 addresses.

## Galaxy Research · Wave 2

Aug 1: second wave attributed to the same operator — 1,158.81 BTC / 2,673 addresses across seven holdings.

## Galaxy Research · Wave 1

Mapped the July 30 fingerprint set: 1,082.65 BTC across ~1,195 addresses into four holdings.

## Kevin Kelbie

Independently flagged the ~45.9 BTC July 31 vault (now Galaxy Wave 2) after Block's scan window; RBF differed from Wave 1.

## Evan Schoenberg

Evening July 31 low-fee (~2 sat/vB) sweeps into a separate vault; Aug 1 hop consolidation (incl. delayed ~0.19 BTC) raised the watched cluster to ~1.20 BTC.

## Ocean block 960511

Coinbase of block 960511 (tag OCEAN.XYZ) paid ~0.060 BTC that later touched the Aug 1 hop vault and was peeled off (not counted as stolen). That peel later hit the same P2SH cash-out (**3KMmeqPe...**) as the stolen evening-wave hops — strong same-operator link.

## Tomer Strolight

Aug 1 morning wave: duress-wallet honey pot swept into a ~0.33 BTC vault; Mk4 attribution later corrected to Mk3-origin seed.

## Marius Offchain

Early Aug 2 consolidation (04:03 UTC): ~65 BTC from ~795 addresses into one vault (community Mk2 drain report); not a Galaxy-published wave.

## Coinkite advisory

Official guidance (updated Aug 1): who is exposed, fixed firmware versions, and migration steps.

## Block Engineering

Root-cause writeup on the RNG fallback, 32-bit reseed, and blast radius beyond BIP-39 seeds.

## WizardSardine

Aug 1 deep dive: who is affected (including Mk3 5.0.x), advanced features still broken with dice seeds, and migration guidance.

## Kevin Loaec

Announcement thread for the WizardSardine writeup.

## CoinDesk

Aug 1 reporting on Galaxy's expanded totals and why further waves remain possible.

## Clay Garrett

July 30 operator used a paid blockchain-data account during the sweeps; findings shared with authorities.
