Wallet Drained Timeline

This is me...

<https://www.reddit.com/r/Bitcoin/s/UeSfLoeyS4>

I'm in a better state now. It's not the end of the world, but it's a lot of fucking money...

Little background: The setup was IRA custodian is Solera National Bank, exchange at Swan Bitcoin was used as an Investment Trust, purchase a dedicated hardware wallets: coldcard mk3 from <https://store.coinkite.com> May 2021 for this ROTH IRA.

Got the wallets, followed all the setup/checks/balances from https://youtu.be/FAYmE5-40PQ?is=wiYMHaS_YGKHjNOY for both wallets, sent a test transaction IRA dedicated hardware wallet (2021). I never setup a 25th Passphrase... REST of the BTC stayed in Swan Exchange.

Speaking only on this IRA Wallet: SD card stored with wallet details (paper phrase) in a baggie. Dormant until January 2025. I couldn't deposit more because of Roth IRA threshold.

Come January 2025, been learning more about retirement, BTC, multi-Sig, and heard about a Megaback Door to get more money into a Roth IRA. Was able to get money into Solera, transfer to Swan, and purchase more BTC and withdraw to the same wallet address. No new hardware involved at this point.

2025)

For some reason, when I got the new coldcards, I never did anything with them for all of 2025, I guess I was too lazy/daunting to use the hardware and relearn. Coming to January 2026 now, I decided to use these new cards. I dug out the wallet seed (from 2021) phrase paper. Dusted off one of the mk4, walked into the corner of a room in my house (only myself and partner live in the house), plugged in the cold card into an outlet and typed in the seed written down from 2021 (stored in my dresser). Restored my 2021 onto one of the new wallet 2025.

Watched updated BTCSession videos on my phone to set everything up again. I never plugged into a computer, since airgapped was the reason I got the coldcards. I used the same SD Card from 2021 though to export the wallet file from the newly restored coldcard. Import that file into Sparrow (needed to update Sparrow at this point), generated a watch-only wallet QR (to scan for my phone) for Blue Wallet to check frequently. This is where the screenshot is from.

Honestly, I haven't touched the wallet with any transactions/seeds since January 2026. This is definitely the point of failure when I restored the 2021 wallet (now on 2 devices).

This was the transaction.
<https://mempool.space/tx/2fe075cf0ec799f3529ed6a28e0a08b45fe1fc9bd93c3f33bdbc42d5bff4f736>

My wallet address is (with all transactions, since it's gone now...):
bc1qldkfrlylk4s9sdyns9jkaajuzugl0dv5m8fxj

My key takeaway now never enter the seed phrase into anything. EVER. Even to restore. Always will generate new and use a 25th passphrase.

of bitcoin before. All bitcoin thefts are generally someone giving away their seed from a stupid manipulation.

When I first read OP's post a few hours ago, I was like "dude probably just entered his seed wherever". But this time, the theft is very surgical. Someone exploited a flaw with coldcard. This is not your fault OP. They talk about you in the article. You will have to unite with the other victims and sue Coldcard to get compensated. I think it would be worth making a new post on this sub whose purpose is for other victims to make themselves known, so you can coordinate a group action

tubalubz • 3d ago
Top 1% Commenter

Coldcard could go out of business because of this... I sure as hell will never consider buying them. I agree, OP, you guys need justice.

omni_wisdumb • 3d ago

The issue with this space is that it's unregulated and very hard to actually track everything. Things being on a public block chain doesn't mean anything.

As far as we know. The company itself could have programmed in the vulnerability, taken \$40M worth of crypto. And they'll just file for bankruptcy or fall back on insurance or fall back on some fine print that says crypto is inherently risky and they're not responsible for anything.

Suing people in general is not easy, let alone in such a space.

this will most certainly be long and hard, but that is his only shot at ever getting compensated.

The bad thing is that, even if he receives damages, this will amount to what the BTC were worth at the time of the theft (I guess). Even if the 0.79 BTC are worth 200k\$ when the trial is over, OP will only get about 50k USD

hetobe • 3d ago

The bad thing is that, even if he receives damages

I guarantee ColdCard has lawyers protecting them from any issues related to... let's just say... code exploits.

This is a very sad situation.

11 more replies

ryt3n • 3d ago

Reading on it a bit more now - looks like it was specific RNG generation that caused this? Sorry im a bit of a noob but goddamn that is wild... thinking of maybe picking up a trezor I dunno.

1 more reply

bittabet • 3d ago

In all honesty I'm not sure Coldcard has that kinda money. Hopefully the authorities can recover the funds if they're moved to a centralized exchange or something.

⊖

AdEuphoric5133 • 3d ago

🏆 Top 1% Commenter

This confirms Coldcard's responsibility. When you sell devices aimed at storing bitcoins, you make sure your random number generator is state of the art random. Coldcard failed their users here and made them lose 38M\$. Victims have to unite and sue, otherwise, Coldcard will just deny, get away with it, and victims will not be compensated

As a matter of fact, Coldcard CEO is already trying to deny the company's responsibility

⊖

xirvin • 3d ago

cold card disclosed the vulnerability back in the day, if they disclosed the vulnerability but owners didn't update then its owners fault. At this point i want a full law enforcement involvement, OP please involve law enforcement. You never know if the funds can be recovered

⊖

BDCRA • 3d ago

When did they disclose the vulnerability? I did not see anything in the articles it all seemed like it was breaking news and not a known thing previously.

+ 1 more reply

kingkongbiingbong • 3d ago

Coldcard CEO is already trying to deny the company's responsibility

A tale as old as time

Also law enforcement should look into subpoenaing Anthropic/OpenAI for details of anyone who was working on such a hack. It feels likely to me that this was AI assisted, as this vulnerability has just been sitting here for 5 years and just happens to occur within weeks of us getting access to smarter models like GPT-5 which are known for their hacking prowess.

spiderbait • 3d ago

Yep, who would trust this. If anything just leave it on Coinbase. All this effort by savvy people to protect their coins and they're still screwed.

Regular people could never handle this.

newtonreddits • 3d ago

Yeah coinbase is honestly safer for average joes

OverLulz • 3d ago

Or this concept of a bank. That stores money for people.

2 more replies

flannel_jackson • 3d ago

That's me. The average 40 year old guy with a house, 401k, bank account and credit cards. Never touched crypto. Saw people make a ton of money speculating on it but have never seen a reason to own or use it. 99.99% chance I'll never own any crypto.

Getting shit stolen sucks.

Klutzy-Peach5949 • 3d ago

I've certainly reduced how much crypto I have, just feels so uncomfortable keeping it safe, just selling for the headspace, and the volatility didn't help

s1amage OP • 3d ago

🏆 Top 1% Poster

I really thought it was 100% my fault. Now I know it's 99% my fault.

ArmchairCryptologist • 3d ago

Dice mixing and passphrases were always supposed to be optional hardening for the ultra-paranoid, as is evidenced by the fact that some notable Bitcoin devs are affected. If a hardware wallet marketed as the ultimate in self-custody ships with a broken entropy generator for *five years*, it's at most 1% your fault for only being *regular* paranoid.

master_of_buffets • 3d ago

Not 99%. This sub often laughed if someone suggested not trusting any device and using dice.

Generationhodl • 3d ago

🌟 Top 1% Poster

Can't be 99% your fault when you buy a product that worked well for long time and then get exploited..

This could have happened to other people too with other wallets if there is some kind of software / hardware bug to be exploited.

Don't be too hard to yourself , it hurts but you can only learn from it

poisito • 3d ago

Maybe not the best thing to mention at the moment, but if this is a legal ROTH IRA, you are going to get penalized by the IRS for taking money out, regardless if it was stolen.
Best of luck OP

StraightUp-Reviews • 3d ago

Ouch. Bro just got double fucked.

matrixmodifier • 3d ago

They still penalize if you've been robbed? My lord

poisito • 3d ago

They just know that you took money out of an account that is designed to not get money out ... it's on the terms of service per se that he signed when he opened the account ..

, because it's a Roth, he will need to pay any capital gains and 10% penalty

5 more replies

1 more reply

Fiach_Dubh • 3d ago

🌟 Top 1% Commenter

you only used sparrow on desktop right?

Did you roll dice when setting up the coldcard for extra entropy or just use the base entropy? if so, how many rolls did you do? less then 100?

Do you know the firmware versions you were using ?

I'm sorry this happened to you.

⊕ 1 more reply

Lanky_Assist_6317 • 3d ago

OK I have read everything and I have a question:
When you bought the original Coldcard, HOW did you generate the seed words? You mentioned in other comments there was no passphrase, but did you use dices or something similar to add random elements to the original seed which came with the device, or did you just take that for granted and used it anyway?

It seems to me that your original seeds were compromised from the start. Let's say some malicious Coldcard worker had access to the hardware wallets in the Coldcard production line or something like that, somehow managed to store a bunch of original seeds hoping buyers would use them as is and retire a couple of years later, raising no personal suspicion. It seems really likely, I have no idea how the production of these wallets work, but it could have some human processing in any way, which creates breaches like that, unfortunately.

s1amage OP • 3d ago

🏆 Top 1% Poster

It was generated by the coldcard. I followed BTCSessions's YouTube channel. I guess I should have used the dice method.

Lanky_Assist_6317 • 3d ago

So you didn't add any entropy whatsoever, either using dice or adding a passphrase. I strongly believe your original seed was compromised from the start through someone malicious with wallet access in the manufacturing chain. I see no other option.

s1amage OP • 3d ago

🏆 Top 1% Poster

Yea, my other wallet (from 2021) used the same but isn't compromised... yet...

bionicmixta • 3d ago

If you have another wallet generated by a coldcard please tell me you're taking steps to move it to something safer? If you think coldcard generates bad seeds and you think your other wallet may also be vulnerable, don't just sit and wait for that money to get stolen.

Obviously don't panic and do something stupid, but don't just leave it indefinitely until that one gets hacked as well.

OldHamburger7923 • 3d ago • Edited 3d ago

🏆 Top 1% Commenter

Look at the mk3 security advisory. It's about specific firmware. The RNG code isn't as random as it could be. Knowing that, an attacker can take their time (even over years) to run code to check potential addresses till they made a list large enough to sweep.

edit:

A flawed fallback RNG apparently derived randomness from a small or predictable device state, including a timer.

- The researchers narrowed that state to about 80,000 possibilities.
- They recreated the wallet's RNG process for each possibility.
- Each possibility produced a candidate 24-word phrase.
- They compared each candidate's resulting public wallet identifier, the xpub, against the known xpub. One candidate matched, revealing the private key and recovery phrase.
- 80,000-state timer range appears to come from a controlled reproduction where timing and device behavior were constrained. It does not prove that every affected wallet has exactly 80,000 possibilities.

**33halvings** • 3d ago

I remember coldcard being promoted as THE hardware wallet for Bitcoin-only people since it was also open-source etc. I'm glad I never bought and used it.

This is an absolute shitshow, might be the end of coldcard as a company.

**xiskghferx** • 3d ago

And all those people, who migrated from the Ledger to Coldcard, just because of new restore feature on Ledger...

We at least learned something - you cannot trust RNG in cold wallets. At least we should use additional BIP39 passphrase, generated elsewhere (e.g. in Bitwarden or Keepass).

But better, you should use multisig, using 2 different HW wallets...

Yes, I agree, with such mistakes, Bitcoin is never going to become mainstream.

**Raverrevolution** • 3d ago

LOL such mistakes only make it stronger. Bitcoin was never going to become mainstream when Mt Gox collapsed, but it did.

Most people will still need banks

**ryt3n** • 1d ago

Bro, this is so trippy man, I have a cold card in a box I bought in 2024 that I never had time to move to. I could have been affected. This is so surreal.

**OutrageousMango** • 3d ago

This is exactly why Bitcoin will never be mass adopted. No matter how safe you try to be, things like this continue to happen.

Sorry this happened. I hope this inspires others to get out of self custody. Its so 2019

I know most people reading this think that it was this guy's fault or you're not that gullible or you're very careful etc etc. I don't know how you guys could sleep at night with lots of money sitting on these hardware wallets

Every time I plugged in to mine back in the day my heart would skip a beat before the balance would show up you know sometimes it gets delayed it almost gives me a heart

Create

Unless you're in it for the tech and you're only in it for the price action just go with the ETF so you can sleep at night. And you could write covered calls on your positions generating 1 to 2% every month which is insane

submarinefarm • 3d ago

Hard to read but you're not wrong. Reddit has been screaming 'buy a hardware wallet' for years and look what happened.
